

I would like to indicate my agreement with the comment submitted by The American Radio Relay League dealing with Docket ET 03-104. As an Electrical Engineer I believe the statements made by supporters of Broadband over Power Line (BPL) are not convincing in view of the lack of any valid technical and scientific information that would recommend approval of this docket. BPL will cause serious interference to the services that operate in the 2 MHz - 80 MHz frequency range. Some of these services are key to the success of the Homeland Security Program. By negating their functioning, grave consequences in the assurance of public safety could result. In addition, approval of ET 03-104 goes against present rules on non-interference. This should not be allowed.
